

CNC Turning Level 2 for Teachers

Meets: Tu, W, Th. From 8:00 AM to 4:40 PM 3 sessions

Location: EIT31 DCC Charles Hawkins building

Instructor: Todd Sanders, Joe Distad, Kevin Poole, or Josh McDowell

Fee: \$1350 (currently GHF scholarships \$1000)

DCC HTEC CNC Turning: Programming, Setup & Operations Level 2

Description:

This course is designed for those that have completed the DCC HTEC CNC Turning: Programming, Setup & Operations Level 1 course and that have earned the NIMS CNC Turning: Programming Setup & Operations Level 1 Credential. (In some cases this prerequisite can be waived, contact the DCC HTEC). Subjects covered in the textbook include: workplace skills, safety, measurement, math, quality, metals, maintenance, drawings including GD&T, layout, hand tools, saws, offhand grinding, drilling operations, CNC basics, CNC lathe setup and operation, basic CNC mill G-code programming, and an introduction to CAD/CAM. Because this class is tailored to teachers we do not require the textbook work prior to the start of class but we do highly recommend reading through the sections on CNC Machining. We do require the completion of the on-line training for both machine types. The skills covered in the online training include CNC lathe setup, programming and operation. The Haas CNC Lathe Workbook also covers G&M-Code programming in much detail. The hands-on portion involves three 8-hour days directly on Haas CNC machines with 1 person to a machine. Class size is limited to 5 people for the highest quality training possible. The hands-on training includes safety, machine pre-checks, startup, tooling and work holding, setting work and tool offsets manually, basic G-code programming, inputting and editing programs, adjusting wear offsets, machining parts and inspecting results with precision measuring tools. The last day of each 3 day segment is set aside for NIMS level 2 testing. This is *optional* but most do attempt it. If you wish you can take the NIMS test or the day can be treated as another day of training. We have alternate projects for this. If you do not attempt the NIMS test the instructor will be able to help you with point plotting, program writing, machine set up, and making the part.

There is an online curriculum that needs to be taken at least 4 weeks before on-site training begins. The skills covered in the online emulator training (Immerse2Learn) include CNC lathe setup, programming and operation. DCC will provide instructions on accessing the online training once registered.

Projects:

The Lathe level 2 work pieces are steel; carbide inserted turning tools are used; parts are dimensioned in inch; machines are run in the inch system; tool nose compensation and type 2 turning cycles are used;

geometry and trig calculations are required. The final day of the class is dedicated to the NIMS Performance Test. The completed part is sent out to the NIMS Met-Tec Committee members for inspection. If the part is 100% within specification then DCC will provide instructions for taking the theory test to complete the credential.

Textbook:

Precision Machining Technology; Hoffman, Hopewell, Janes, Sharp; Delmar-Cengage Learning
ISBN-13:978-1-4354-4767-7

Workbook:

Haas Automation CNC Lathe Programming Workbook (hard copy provided by DCC)

Online Curriculum:

Immerse2Learn : Basic Haas CNC Lathe Setup
Basic Haas CNC Lathe Programming

Summary:

30-40 hours textbook and online (begin at least 4 weeks prior to on-site training)
3 eight hour days on-site working on Haas CNC machining centers
Cost: \$1350. Currently, the Gene Haas Foundation scholarships are available for HTEC Network teachers for \$1000.

NIMS Credentials:

NIMS CNC Turning: Programming Setup & Operations Level 2
